Dear Sir/Madam,

I am Pieter, 43 years old, with over 19 years of experience in IT, web and app development, and the startup and agency scene.

I was trained as a Master in Computer Science at KU Leuven, and I have applied the theoretical and analytical background as a:

- System Architect
- Software Engineer / Tech Team Lead
- CTO for small and large (including my own) startups and agencies (ranging from 5 to 40 people)
- Dreamer and entrepreneur

I have always performed these roles as a freelancer and have never worked as an employee. However, this is no longer a necessity for the new roles I will take on in my future career. Throughout all these functions, I have consistently strived for efficiency and have thus gained extensive experience and knowledge in:

- Design System Thinking
- Domain-Driven Design
- Test & Behavior-Driven Development
- Design & Development of generic software (reusable services and UI libraries)
- Code generation & AI-assisted development

I am currently working as an independent consultant and enjoy taking on projects from start to finish:

- (Business) Analysis and Solutioning

- Design of Problem + Solution Space (domain)
- (Technical) Design (Architecting) of systems
- UX Design + Prototyping
- Frontend + Backend Development (super efficient; full-stack, serverless, ...; very broad technical knowledge of various tech stacks)
- Cloud deployments

I can do this both in a team, in a leading role, to assemble, train, and/or lead a team;

Or individually, to take on one or more tasks from the above package within an existing project/team, or to carry out an entire project from A to Z.

What I (in my own opinion) am not good at (or lack the drive for):

- Personal branding; profiling
- Networking
- Business development
- Cutting your losses

All of the above has brought me, through trial and error, to where I am now; constantly seeking new and additional challenges, interesting projects, and people.

I am curious how a profile like mine might fit into a structure and vision like yours and would love to discuss this further.

I hope you feel the same.

Best regards,
Pieter Soudan
