4 maart 1981

Dear Sir/Madam,

I am Pieter, 43 years old, with over 19 years of experience in IT, web and app development, and the startup and agency scene.

I was trained as a Master in Computer Science at KU Leuven, and I have applied the theoretical and analytical background as a:

- System Architect
- Software Engineer / Tech Team Lead
- CTO for small and large (including my own) startups and agencies (ranging from 5 to 40 people)
- Dreamer and entrepreneur

I have always performed these roles as a freelancer and have never worked as an employee. However, this is no longer a necessity for the new roles I will take on in my future career. Throughout all these functions, I have consistently strived for efficiency and have thus gained extensive experience and knowledge in:

- Design System Thinking
- Domain-Driven Design
- Test & Behavior-Driven Development
- Design & Development of generic software (reusable services and UI libraries)
- Code generation & AI-assisted development

I am currently working as an independent consultant and enjoy taking on projects from start to finish:

- (Business) Analysis and Solutioning

- Design of Problem + Solution Space (domain)
- (Technical) Design (Architecting) of systems
- UX Design + Prototyping
- Frontend + Backend Development (super efficient; full-stack, serverless, ...; very broad technical knowledge of various tech stacks)
- Cloud deployments

I can do this both in a team, in a leading role, to assemble, train, and/or lead a team;

Or individually, to take on one or more tasks from the above package within an existing project/team, or to carry out an entire project from A to Z.

What I (in my own opinion) am not good at (or lack the drive for):

- Personal branding; profiling
- Networking
- Business development
- Cutting your losses

All of the above has brought me, through trial and error, to where I am now; constantly seeking new and additional challenges, interesting projects, and people.

I am curious how a profile like mine might fit into a structure and vision like yours and would love to discuss this further.

I hope you feel the same.

Best regards,
Pieter Soudan

Skills

I hold a **Master's degree in Computer Science** and have **19 years** of professional **experience** as an **independent consultant**.

I possess a highly developed analytical and abstract thinking ability and am capable of designing highly generic, extensible, and modular systems. I apply most design patterns in an appropriate manner, working pragmatically, thoroughly, and accurately, always with attention to best practices in security and performance. I am familiar with principles from both **Object-Oriented** and **Functional Programming**.

I am highly curious and quickly pick up new technologies, methods, or ways of thinking. I have been closely monitoring the rapidly evolving landscape in web and app development for years. Additionally, I have extensive experience in designing architectures and recruiting, leading, and coaching development teams.

My passion lies in web development, and I consider myself a **full-stack engineer** and **system/software architect** who enjoys being involved in everything from analysis and design to implementation on both the server and client sides, as well as the data layer. I am also very familiar with the operational aspects of deploying and maintaining a web application.

I have a deep knowledge of the following technologies and frameworks:

JavaScript (ES15), TypeScript, React, Node.js, GraphQL, Express, Hapi, ElysiaJS, Next.js, Razzle, MongoDB, Redis, MySQL, Postgres, Elasticsearch, JSS, Material UI, Tailwind, Storybook, Meteor, Lerna, Bun, WebPack, Gulp, Rollup, Babel, Flutter (Dart).

This is the stack I have mainly worked with over the past 7 years. Previously, I have also used the following technologies and frameworks: PHP, Zend, Symfony,

Doctrine, jQuery, MooTools, ActionScript3, Air, CSS (Sass, PostCSS), Twig, Subversion, Java, Perl, Python, Ruby.

Recently, I have also been involved in Game Development using **Unity**, so I have sufficient knowledge of **C#** and **.NET** as well.

I have been working on MacOS for 3 years now, but I also have over 12 years of experience with other Unix systems (Ubuntu, RedHat, Fedora, etc.) and am highly skilled with the command line. I am very familiar with maintenance and deployment and am up to date with recent developments in cloud management and continuous integration, deployment, and delivery. I am proficient with the following technologies: **Git**, **GitLab**, **GitHub (actions)**, **Docker**, **Kubernetes**, **Google Cloud**, **AWS**.

Besides (or perhaps despite?) my analytical and technical skills, I am also very creative and have a **strong affinity for graphic design and usability**. I am thoroughly familiar with Google's **Material Design** spec and the **CSS3** spec.

I am communicative and social and can effectively lead and motivate people. My native language is Dutch and I speak and understand English fluently. My knowledge of French is sufficient to express myself.

Experience

Lemon Software

November 2020 - now, Kontich

Involved in about ten projects as an architect and technical team lead. I developed a new technical vision and built a new team around it, which I also coached, including leading the technical interviews. With this team, I delivered several web and native apps (React web, React Native, Flutter) and set up efficient GraphQL-based backends (NodeJS, Express, Nest). Additionally, I conducted several workshops (both internally and externally) on best practices in Domain-Driven Design, Design System Thinking, and best practices in Software Engineering, Test-Driven Development, and Behavior-Driven Development. Furthermore, as an independent consultant, I carried out the entire business analysis, technical solutioning, architectural and graphic design, and complete frontend and backend development for a custom-developed Extranet application for Procertus, built on top of Microsoft Dynamics.

Private Projects

January 2023 - now, Kontich

Worked on three private side projects to learn and master new technologies. One project makes extensive use of AI techniques to optimize workflows for image synthesis and image processing. Another project is set in the Web3 space, utilizing a blockchain-based decentralized storage network for the storage and retrieval of

structured data. The third project is a turn-based strategy game where techniques and technology from game development are applied.

Solar Apps

April 2016 - September 2020, Antwerpen

Provided technical guidance to startups and digital transformation for SMEs. We developed a library of reusable modules to efficiently build administrative software. We guide our clients through the analysis, design, and implementation of custom applications. I lead a team of four, conduct functional and technical analysis, perform code reviews, and contribute to implementation.

Textus.io

September 2015 - April 2019, Leuven

Automatic Typesetting in the cloud. Together with my brother, I designed and developed cloud software that automatically converts unstructured text into online publications and print-ready PDFs. With Textus, the structure within the text is recognized, allowing design to be applied. I designed and developed the pipeline of various services and processes that are deployed sequentially (analysis > cleanup > design > build > deploy).

Pokerbundle.io

April 2014 - April 2016, Wilrijk

In collaboration with a casino, I designed and developed online software for organizing and managing live poker tournaments. Mobile devices, computers, and TVs are involved in real-time throughout the tournament. We used Meteor as the application framework, and this was my first project where a web app was built according to the architecture that is now commonly used for web apps.

Pokah nights.com

September 2012 - September 2015, Lint, Wilrijk

Together with a few friends, I founded a live Poker club. By focusing on a powerful web platform that I developed for tracking results, statistics, and loyalty programs, we quickly grew to become the largest club in Flanders, organizing 5 poker days and evenings per week with tournaments of up to 250 participants.

Telenet

September 2009 - July 2010, Mechelen

As a consultant, I contributed to the development and performance improvement of TV.be. This project evolved into Yelo by Telenet, and I was instrumental in the launch of Telenet's online TV offering. I was responsible for the analysis and development of new services, as well as the performance improvement and stability of the platform.

Xprimi

September 2007 - June 2009, Antwerp

Xprimi specializes in technological development in the field of psychological and behavioral profiling, with applications in online marketing, market research, and human resources. As a co-founder, I was responsible for the technical realization and architecture of the software, which we successfully deployed for clients such as Vodafone and StartPeople.

Red & Ivory

May 2008 - March 2016, Wilrijk

Web development for media sites with several thousands of daily visitors, both for our own projects and for clients. I led a team of four and was responsible not only for team leadership but also for operations and performance.

Syntra

February 2009 - May 2010, Hasselt

I wrote and taught a course on game development, where important concepts in gaming and applied mathematics were explored through simple exercises (movement and (matrix) transformations, collision detection, physics engines, etc.).

Red & Ivory

September 2005 - May 2008, Mortsel

After completing my studies, I started an online advertising agency specializing in gamevertising. We developed several gamevertising products (MG Open, MG OnTour, Mind4Music, WiNiMi), and I built about five (Flash) games in ActionScript 3.

-

1992 - 2005

Before and during my studies, I created and maintained several websites for friends and acquaintances. I quickly became familiar with HTML, JavaScript, and PHP. At the age of 16 (1997), I built a JavaScript framework to dynamically generate UI, something that is now a common best practice.

Education

KUL, Leuven

2000-2005

Bachelor's and Master's degree in Computer Science. Specialization in Software Engineering, Computer Graphics, and Artificial Intelligence. Graduated with distinction.

St.-Rita college, Kontich

1993 - 1999

High School, Science-Mathematics
